

SmartComply™

A better way to achieve environmental compliance

Now managers can improve fuel risk mitigation and implement environmental compliance easily and cost-effectively. With SmartComply, you can remotely monitor underground storage tanks equipped with automatic gauges, generate and maintain mandatory compliance reporting, and efficiently respond to and track environmental alarms.

Email-based, configurable notifications

SmartComply gathers information about tank tightness test results, line and sensor status, and alarm information in a centralized tool. The system's email-based alarm notifications track priority alarms from detection through closure. You can easily configure alarm notifications according to your company's unique business needs.

Powerful reporting capabilities

Included with SmartComply are powerful management reporting capabilities that summarize company or regional compliance statuses across multiple locations. You can also review detailed site level compliance summaries, analyze inventory control, and evaluate sensor status and alarm history.

Key benefits at a glance

- Improve response time and closure tracking of priority environmental alarms
- Reduce non-compliance events and associated fines
- A centralized history of detailed site-level compliance reports in one place
- Increase productivity for environmental personnel
